JOSEPH EKPOH

DATA ANALYST

Data Cleaning & Analysis | Data Querying & Management | Data Visualization & Reporting.

+234 9124967102 | ekpohjoseph6@gmail.com | LinkedIn Profile | Portfolio Link | Lagos, Nigeria.

PROFESSIONAL SUMMARY

Insight-driven Data Analyst skilled in data cleaning with Excel Power Query, querying with SQL, and building DAX-powered Power BI dashboards. Experienced in turning multi-table datasets into clear answers for business decisions. In a capstone project, transformed 14 logistics tables into 4 dashboards, identified that under 5% of customers had the lowest credit days, and proposed an early payment initiative that raised their credit days by 20% in simulation**.**

TECHNICAL SKILLS

Data Cleaning & Analysis (Excel):

- Cleaning and transforming data: handling missing values, duplicates, and inconsistent formats, with data validation.
- Exploratory analysis and summary statistics to identify trends, patterns, and outliers.
- Pivot tables and formulas for summarizing and analyzing dataset.

Data Querying & Management (SQL Server):

- Writing queries (SELECT, filtering, sorting) to extract data from relational databases.
- Joining multiple tables and aggregating results with GROUP BY and HAVING.
- Advanced querying with subqueries, CTEs, and window functions.

Data Visualization & Reporting (Power BI):

- Building interactive dashboards, choosing the right chart for each business question.
- Designing and tracking KPIs.
- Turning findings into clear business recommendations and presenting insights to non-technical audiences.

SOFT SKILLS: Data Storytelling, Problem-Solving, Analytical & Critical Thinking, Attention to Detail, Adaptability & Learning Agility.

DATA ANALYTICS TRAINING/CERTIFICATION

TS ACADEMY, Data Analytics Program (Hajime Cohort) **2026**

CAPSTONE PROJECT

- Cleaned, analyzed, and visualized 14 logistics tables into 4 dashboards using Power Query, SQL, DAX, and Power BI.
- Found $98.3M (18%) of annual revenue potential sitting in 32 inactive accounts, including 9 of the top 40 customers; recommended a prioritized win-back plan for high-value accounts.
- Found 15 trucks (12.5% of fleet) sidelined in maintenance, each worth ~$77.7K in monthly revenue; recommended repair-priority scheduling to recover up to $1.2M monthly.

EXCEL FOR DATA ANALYSIS

- Built a foundation in data analytics concepts and Excel for data analysis, using text and aggregate functions to prepare and summarize data.
- Organized datasets with Excel Tables and cleaned and transformed raw data using Power Query.
- Applied conditional formatting, conditional functions, and lookup functions to validate, flag, and match data across sheets.
- Summarized large datasets with PivotTables and Power Pivot to surface trends and answer business questions.
- Completed an Excel Sales Analysis Project, applying the full workflow from cleaning to insight.

POWER BI

- Progressed from Excel into Power BI, learning report building and dashboard design.
- Performed data transformation with Power Query and built data models by defining relationships between tables.
- Created DAX measures and interactive visuals to track key metrics.
- Delivered a Power BI project, building a dashboard from a cleaned, modeled dataset.

SQL

- Queried relational databases with SQL, retrieving and filtering data across tables.
- Combined data from multiple tables using joins and wrote subqueries for multi-step analysis.
- Sorted, grouped, and summarized data using ORDER BY, GROUP BY, and aggregate functions.
- Applied CASE statements to categorize data and build conditional logic into queries.

EDUCATION

Bachelor of Science (BSc.), Computer Science; University of Calabar **2025**
